## Additional Information

**Account Balances:** When checking account balances, run both the Aging of A/R and Payment Plan reports, then total the amounts to get the total account balance.

**Hygiene appointments:** After setting up providers and operatories, contact Open Dental to run a hygiene query that automatically associates the correct provider (dentist and hygienist) to future appointments.

**Procedures codes:**

- **Explosion Codes:** Explosion codes are converted as Procedure Buttons, but attached procedure codes will not be D-codes. To use you will need to set them up again with the correct procedure codes.
- **Recall procedures:** Existing recall appointments will not have D-code procedures attached. You will need to edit the appointment and attach the correct procedures. We recommend creating Appt Quick Proc Add groups in Definitions (Setup, Definitions).

**Income transfers:** Open Dental associates payments with individual patients who had work done. This can result in individual family members having offsetting negative and positive balances, even if the family balance is 0.

- **For family balances that are 0 at the time of conversion** we automatically create conversion payment transfers to make patient balances 0. (We do this so you don't have to manually transfer amounts). A line item will show in the account. These payments will also show in the Production and Income report if the date range includes the conversion date, resulting in inaccurate numbers.
- **For family balances that are not 0 at the time of conversion** (they show on the Aging of A/R report), we do not create automatic conversion payment transfers. Instead, your staff will have to manually create income transfer payments as payments are made and family balances reach 0. This will reallocate the funds among family members and providers so individual balances become 0. Make sure to back date these income transfer payments to the date of the conversion so they do not affect reports. See [Income Transfers](#).

**Reports:** Do not run reports in Open Dental for historical information. Run historical reports in Dentrix or EZ Dental through the date of the conversion. Open Dental reports will accurately reflect information entered the day after the final conversion and forward.

**If bridging to Dexis:** You can manually renumber patients, or we can provide a spreadsheet with patient numbers so Dexis can renumber.
